

BEAM TRANSPORTER

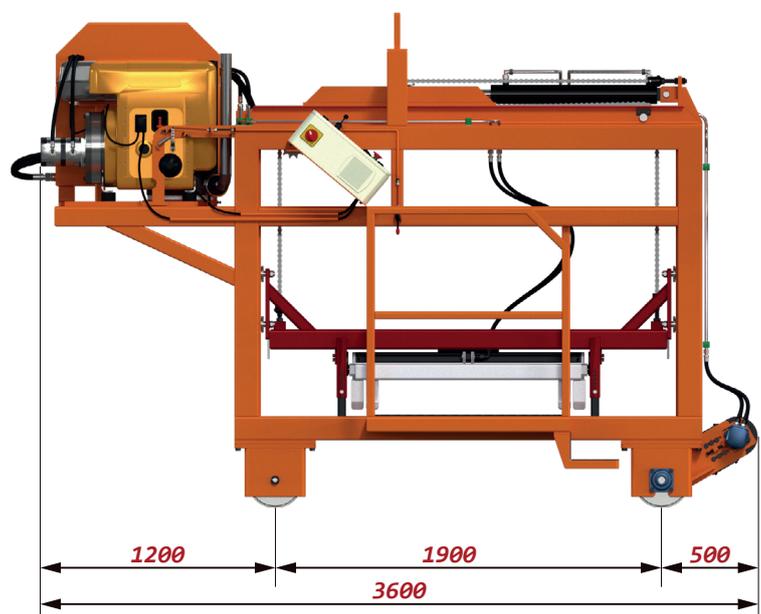

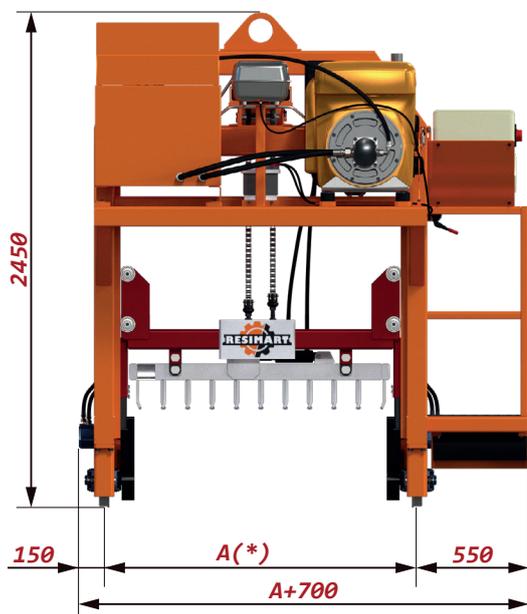

Weight	2500 kg
Total Power	10 KW
Load Capacity	2000 kg
Max. Product Length	6 m
Lift Height	1.2 m
Traslation Speed	Up to 100 m/min

Machine for the extraction of prestressed beams quickly and easily, improving both the production and the safety of the process.

- Resimart© Beam Transporter Machine has a hydraulic power unit group fed by a diesel engine up to 10 KW, which guarantees full autonomy and high power.
- Compact design for easy handling of the machine.
- In its standard version, it allows the handling of up to 2000 kg weight and 6 m beam sets.
- It allows the products stacking, reaching a height of up to 1 m.
- Hydraulically driven lifting frame, with a safety device that prevents the fall of the product.
- Optionally, it can be provided so as to lift and carry previously stacked packages, task previously done by the machine itself.
- Can be equipped with a wireless control console, thus increasing immensely both its safety and its functionality.
- It's the best alternative to avoid known bottlenecks caused by the workload of the gantry crane.
