

BED CLEANER

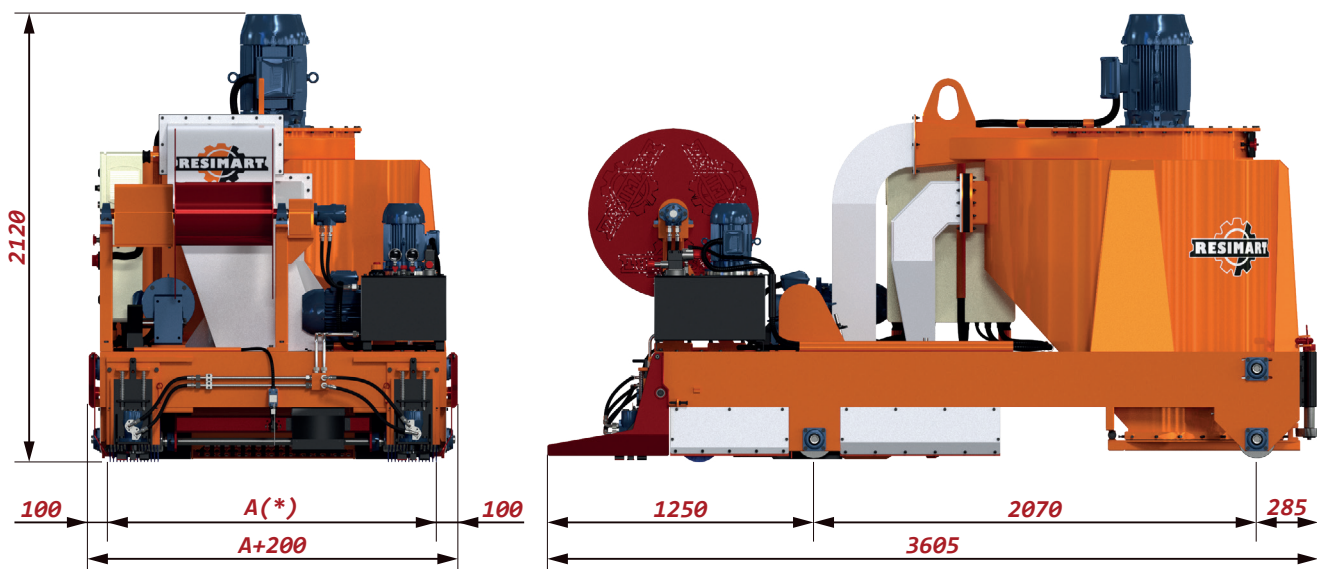

Weight	2500 kg
Total Power	26 KW
Vacuum Power	18.5 KW
Crushing Power	4 KW
Traslation Speed	10 m/min
Waste Capacity	1.5 m ³

Machine for cleaning the surface of the manufacturing beds, both the central area and the laterals adjacent to the rails, removing the remnants of concrete and other products.

- Resimart® Concrete Bed Cleaner has a powerful vacuum cleaner, specially designed for its task. It's the responsible for collecting the remains of concrete while at the same time removing water from the metal beds and operates automatically.
- A crushing device, placed in the center, crushes concrete remains into small fragments that can be vacuumed effectively.
- Two side scrapers, driven by hydraulic motors allow a thorough cleaning of the surface closer to the bed rails, which tend to accumulate more concrete remains.
- All parts in contact with the concrete remains are manufactured with abrasion resistant materials in order to minimize wearing.
- The same machine can also be used to spray release agent on the beds, once cleaned.
- A couple of special brushes assists in the extraction of the concrete remains attached to the beds.
- Can be equipped with a hydraulic opening tank in order to expedite the machine handling and increase its security.
- Optionally, an additional vacuum system can be embedded in order to clean the hallways.
